1 Introduction

<Write an introduction of the Project Vision Document providing an overview of the entire document. >

1.1 Purpose

<Specify the purpose of the Project Vision Document and why the organization would create this document.>

The purpose is a clear vision and direction for the shift management app, it aligns stakeholders on the goals, scopes and intended outcomes of the project

1.2 Scope

<A brief description of scope>

The shift management is a website application that helps businesses manage employee schedules, availability, view schedule and shift swapping. To ensure efficiency for the manager to schedule and transparency for employees to view and edit shifts

1.2.1 In Scope

<Write areas in scope for this project>

1.Employee shift's view

2.Availability management

3.shift swap/offer system (with management approval)

4. Manager approval workflow

1.2.2 Out of Scope

< Define the processes and system are not affected or influenced by this document >

1.Notifications for updates on the schedule

2.payroll integration

3.reporting or assigning duties for each shift and calculating the labor cost for daily ,weekly and monthly view

1.3 Definitions, Acronyms, and Abbreviations

<This subsection provides the definitions of all terms, acronyms, and abbreviations required to properly interpret the Project Vision document. This information may be provided by reference to the project's Glossary>

This section explains all of the terms and abbreviations that are being used in this document, for those who are unfamiliar with them. Not everybody who reads this document will understand all of the terms, so this section is helpful.

Term	Explanation
Set availability	The time slots an employee sets to indicate when they can work or cannot work
Shift swap	The process of exchanging a scheduled shift with another employee
Manager approval	The process where manager approves or rejects shift request or shift offer
Shift offer	The process when an employee cancel the shift and doesn't want to swap the shift with other so the time slot becomes free for anyone to claim after the manager approval
Shift view	The main interface where employees can view schedules and pending requests
Availability view	The manager can view the employees availability and can assign the associates availability accordingly

1.4 References

<This subsection provides a complete list of all documents referenced elsewhere in the Project Vision. Identify each document by title, report number if applicable, date, and publishing organization. Specify the sources from which the references can be obtained. This information may be provided by reference to an appendix or to another document>

Reference File Name	Version	Description
7shifts (Employee scheduling App)	Online	Competitor analysis features like scheduling and availability
Walmart Employee Scheduling App	Described by Employee	Real-world reference to understand how large organizations like Walmart handle shift scheduling, availability and approvals
WhenIWork	Online	Competitor analysis, industry research

This section also contains links to all other places that were referred to in this document. These may include:

- *Web sites*
- *URLs or network locations*
- *Research done for similar products*

Name	Link
7shifts	https://www.7shifts.com
Walmart Employee Scheduling app	(internal system)
WhenIWork	https://wheniwork.com
connecteam	https://connecteam.com/

2 Positioning

2.1 Business Opportunity

< Briefly describe the business opportunity being met by this project >

This project meets the need of efficient workforce scheduling by organizing schedules, making it more simple to both the managers and associates. It has a scalable solution to collaborate with superstores that are seeking to modernize their operations.

2.2 Problem Statement

< Provide a statement summarizing the problem being solved by this project. The following format may be used>

The Problem of	Some stores use inefficient and time consuming workforce scheduling.
affects	This issue affects both the managers and associates of the store.
the impact of which is	The impact would be potential scheduling conflicts due to an error from a manager, miscommunication from employees, and not knowing when your next shift will be.
a successful solution would be	A singular online platform where there’s different sections for managers and associates. On the manager's side, would have access to approve an associate's availability and create their schedule. In the associates side, would give an option to change their availability, view their schedules, as well as swap/offer shifts with others in their department.

Table 1 Problem Statement

2.3 Product Position Statement

< A product position statement communicates the intent of the application and the importance of the project to all concerned personnel >

For	Superstores
Who	Managers and associates
The superstore shift management website	is an employee scheduling software

That	Reduces burden to manage schedules and completely gets rid of potential schedule conflicts. Also simplifies swapping and offering shifts to others and makes it convenient to access your schedule online.
Unlike	Other companies set up their schedule only on paper, which can only be viewed in person which is difficult to track, especially when coming back from a vacation. Also swapping and offering shifts would require the associate to message or talk to someone then would have to talk to their manager about it, which is a huge hassle and time consuming.
Our product	With our platform, employees can view their schedule online at any time and anywhere. Swapping and offering shifts would also be more simplified with a touch of a button as the other employee would receive a notification that someone wants to swap or offer a shift. Once that employee agrees to swap or take the shift, the manager will be able to accept or decline the shift change through the website.

Table 2 Product Position Statement

2.4 SWOT Analysis

<Reference: https://www.businessballs.com/strategy-innovation/swot-analysis/)

Strengths	**Weaknesses**
Centralized system will reduce scheduling conflicts	Requires an internet connection
Makes shift trading easier between employees	Limited features on release
Provides employees with real time updates on their weekly schedule and shift adjustments	Initial integration and employee training will require time
Opportunities	**Threats**
Scalable platform that is open to new features in the future	Competition between more established business management software
Can be adapted for use in other stores	Technical issues can affect scheduling and shift coordination
Can be expanded on mobile platforms, increasing accessibility	Potential security and privacy risk

3 Stakeholder and User Descriptions

< This section provides a profile of the stakeholders and users involved in the project, and the key problems that they perceive to be addressed by the proposed solution. It does not describe their specific requests or requirements as these are captured in a separate stakeholder requests artifact. Instead, it provides the background and justification for why the requirements are needed>

3.1 Stakeholder Summary

< There are a number of stakeholders with an interest in the development and not all of them are end users. Describe and list the project stakeholders>

Stakeholder Name	Represents	Role
Employee	Primary end users of the application for viewing schedules and requesting their shifts	To provide feedback on the usability of the employee-facing features.
Administrator/ Manager	The management and administrative staff of the company who are responsible for creating and managing employee schedules	Validate that the solution meets operational needs, and act as the primary users for the management-side features.
Management team	The team responsible for facilitating communication between users and the development team.	To gather user feedback, relay it to the development team, and ensure the project stays aligned with business objectives.

Table 3 Stakeholder Summary

3.2 User Summary

< Present a summary list of all identified users of the system >

User Name	Description	Responsibilities	Stakeholder
Employee	Primary end user of the system	View work schedules, update availability, and request shift swaps	self
Manager	End user of the system	Create and manage employee schedules according to the employees' availability	self
Admin	End user of the system	Can add or remove users and ensures system runs smoothly	self

Table 4 User Summary

4 Stakeholder Requirements

< Categorize and list the requirements from the perspective of the business stakeholder and potential system users >

ID	Requirement	Stakeholder
Req-01	Tools to efficiently create, manage, adjust, and approve employee schedules	Employer/Manager/admin
Req-02	Clear interface for managers to approve or deny shift swap requests submitted by employees	Employer/Manager/admin
Req-03	Dashboard where they can easily view their work schedule.	Employee/admin
Req-04	Function to send shift swap or offer requests to their colleagues from within the website	Employee/admin
Req-05	A system which employee can edit or change the availability and the manager can prove or decline the request	Employee/Manager/admin
Req-06	A system which allows admin to add or remove edit employees	admin

Table 5 Stakeholder Requirements

5 System Features

< List and briefly describe the system features. Features are the high-level capabilities of the system that are necessary to deliver benefits to the users. Avoid design. Keep feature descriptions at a general level. Focus on capabilities needed and why (not how) they should be implemented >

ID	Feature	Stakeholder Requirement ID
SF-01	Scheduling management tools	Req-01
SF-02	Manager approval interface	Req-02
SF-03	Employee Dashboard	Req-03
SF-04	Shift swap/offer system	Req-04
SF-05	Availability management	Req-05
SF-05	Remove and add employee	Req-06

Table 6 System Features

6 Assumptions

<List all assumptions made about any of the content provided in this document. Assumptions should be applicable to the scope, desired solution, requirements, business process, and stakeholders >

Stable Core Requirements: We assume that the core features defined in this document (schedule management, shift swapping, etc) will remain stable and will not undergo significant changes during the development phase.

Technical Feasibility: It is assumed that the proposed technologies are appropriate for the project's goals and that the development team processes the necessary skills to successfully build and deploy the application as specified.

User Accessibility: We assume that all intended users(managers and employees) have regular access to a web-enabled device(such as computer or smartphone) and the basic technical skills required to operate the web application.

7 Constraints

<List any process constraints, external constraints or other dependencies >

1. Time: the app must be developed within two semesters (Time Limitation)
2. Budget: no dedicated budget, only free or student versions of tools/services can be used
